

MARK DENVER GREGORIO

Senior Mobile Engineer / Mobile Technical Lead

(Android | Kotlin | Jetpack Compose | KMP | IoT | Cloud)

Senior Mobile Engineer with 10+ years of combined professional and freelance experience delivering Android, cross-platform, IoT, and cloud-integrated mobile solutions. Proven expertise in Kotlin, Java, Jetpack Compose, Clean Architecture, MVVM, and KMP, with a strong background in BLE, Geofencing, NFC, and real-time device communication. Experienced in technical leadership, system architecture, mentoring, and cross-functional collaboration, including work with multi-national teams. Adept at building production-grade, scalable applications for enterprise IoT and commerce domains.

Santo Tomas, Batangas, PH

CORE TECHNICAL SKILLS

• Mobile & Cross-Platform Development

- Kotlin, Java, Android SDK, Jetpack Compose
- Kotlin Multi Platform (shared business logic)
- iOS Development: Swift, SwiftUI, UIKit (supporting)
- Clean Architecture, MVVM, Dependency Injection
- Offline caching, background processing, modularization

• IoT, Device & Location Technologies

- Bluetooth Low Energy (BLE), Bluetooth Mesh
- NFC, Geofencing, Nearby Device APIs
- Google Map SDK & Location Services
- MQTT, real-time device communication

• Backend, Web & APIs

- Java, Spring Boot, Hibernate / JPA
- RESTful APIs, GraphQL, OAuth, JWT
- Node.js
- React.js, TypeScript, Vite, Tailwind CSS

• Database & Storage

- PostgreSQL, MySQL, MSSQL, Oracle
- DynamoDB, MongoDB
- Firebase (Firestore, Realtime DB, Storage)
- SQLite, Room, Realm

• Cloud, DevOps & CI/CD

- Google Cloud Platform (Maps, Places, Geocoding, Firebase)
- Amazon Web Services (EC2, S3, IAM, CloudWatch, IoT)
- GitHub Actions, GitLab CI/CD
- Gradle, Maven

• Tools & Collaboration

- Android Studio, Xcode, IntelliJ IDEA, VS Code
- Git (GitHub, GitLab, SVN)
- Jira, Confluence, Redmine
- Postman, UML, JSON/XML
- Figma, Adobe Photoshop

• AI-Assisted & Agentic Software Development

- Directing multi-agent AI coding workflows (Claude Code) across the full software delivery lifecycle
- AI-orchestrated Kotlin Multiplatform / Compose Multiplatform architecture across multi-repository systems
- Figma-to-code translation workflows augmented by AI design-context tooling
- CI/CD pipeline diagnosis, root-cause analysis, and remediation using AI-assisted debugging
- Authoring AI operating runbooks, project manifests, and autonomy/governance rules for AI-directed engineering workflows

PROFESSIONAL EXPERIENCE

• Android Developer

- Vendor: Encora - Makati | Client: GCash Mynt
- *March 2026 - Present*
 - Designed, developed, and maintained Android applications using Kotlin, ensuring high performance and responsiveness
 - Collaborated with cross-functional teams including product managers, designers, and backend engineers to define and implement new features
 - Integrated RESTful APIs and third-party services for payments, authentication, and financial transactions
 - Ensured application security by implementing best practices in data encryption, secure storage, and fraud prevention
 - Optimized app performance, reducing crashes and improving load times through profiling and debugging tools
 - Conducted code reviews and maintained code quality using clean architecture principles and design patterns (MVVM/MVP)
 - Enforced code quality gates using SonarQube static analysis across pull requests
 - Implemented unit tests and UI tests to ensure code reliability and maintainability
 - Managed internal and QA app distribution and remote config parameters through Firebase Console (App Distribution, Remote Config)
 - Monitored app performance and user behavior using analytic tools and crash reporting platforms
- **Key Project: GCash App**

• Software Mobile Developer

- Globe Telecom - BGC, Taguig
- *October 2025 - January 2026*
 - Developed enterprise-scale mobile applications using Kotlin, Jetpack Compose, Kotlin Multi Platform, and React Native
 - Designed and implemented secure, high-performance mobile features including OTP authentication, push notifications, dynamic links, geolocation, and offline caching
 - Integrated mobile application with complex telco backend ecosystems (REST APIs, GraphQL, OAuth, Firebase, SMS Gateways, internal telco APIs)
 - Collaborated with backend, web, product, and design teams to define technical solutions and delivery timelines
 - Enforced architecture standards, security practices, and performance optimization
 - Participated in technical reviews, system design discussions, and continuous improvement initiatives
- **Key Project: GlobeOne App**

PROFESSIONAL EXPERIENCE (CONTINUED)

• Senior Engineer Level 3 / Team Lead

- MinebeaMitsumi Philippines, Inc. - Sto. Tomas, Batangas (FPIP)
- *April 2019 - October 2025*
 - Served as technical lead for multiple Android and iOS IoT applications
 - Architected mobile systems using Clean Architecture, MVVM, and Dependency Injection
 - Led development of mobile applications integrating BLE, NFC, MQTT, Geofencing, and REST APIs
 - Conducted system analysis, feasibility studies, and technical planning
 - Refactored legacy codebases to improve performance, scalability, and maintainability
 - Managed GitHub repositories, performed code reviews, and handled critical production issues
 - Coordinated with Japanese engineering teams through stand-ups and technical reviews
 - Authored technical documentation, system handbooks, and user manuals
 - Participated in Agile ceremonies including sprint planning, reviews, and retrospectives
- **Major System Delivered (Market Release)**
 - **SADIOT Mobile App (Smart Door Lock System)**
 - BLE-based secure lock/unlock, REST APIs, Wi-Fi hub integration, MQTT messaging, AWS IoT (Lambda, DynamoDB, API Gateway), Google Maps & Geofencing
 - **SALIOT Mobile App (Smart Lighting System)**

- Mobile lighting control (Android/iOS), BLE pairing, brightness and color temperature control, presets, automation, real-time UI feedback
- **Bed Sensor Mobile App (Healthcare Sensor System)**
- Bluetooth Mesh communication, medical sensor data visualization, alerts, real-time monitoring, secure device pairing
- **Digital Car Key Mobile App (Car Key Controller System)**
- BLE proximity unlocking, Nearby Device APIs, NFC tap-to-unlock, geofencing triggers, secure onboarding and encryption

- **Embedded Software Engineer**

- Kinpo Electronics Philippines, Inc. - Lipa City, Batangas (LIMA Park)
- *July 2017 - July 2018*
 - Designed and developed UI and control systems for industrial SLS 3D printers
 - Integrated embedded hardware components using C#, WPF, FPGA, and microcontrollers
 - Performed debugging and troubleshooting of hardware-software integration issues
 - Collaborated with cross-functional teams to optimize system performance
 - Prepared wiring diagrams, system documentation, and user manuals
 - Supported machine testing, calibration, and quality assurance
- **Key Project: SLSware & Buildware**

FREELANCE EXPERIENCE

- **Part-Time Mobile Developer**

- Wrap & Carry - Omni Channel POS system
- *July 2025 - November 2025*
 - Designed and built a full omnichannel POS ecosystem covering mobile, web, and backend platforms
 - Developed Android mobile application using Kotlin and Jetpack Compose
 - Built backend services using Java, Spring Boot, REST APIs, and JWT authentication
 - Implemented real-time synchronization between online orders and physical store transactions
 - Integrated Xendit payment gateway for secure cashless transactions
 - Developed inventory management with automatic stock deduction, low-stock alerts, and expiration tracking
 - Implemented Google Maps-based delivery tracking
 - Built sales analytics dashboards and role-based access control (Admin, Cashier, Driver)
- **Repositories:**
 - Mobile: github.com/MarkDenver01/carry_mobile_app
 - Backend: github.com/MarkDenver01/carrybackend
 - Web: github.com/MarkDenver01/carryfrontend

- **Part-Time Developer**

- Fourgrammers System Development and Services - Tanauan City, Batangas
 - Designed and built mobile applications, web systems, and full-stack solutions from scratch
 - Created UI/UX wireframes, prototypes, and high-fidelity designs
 - Developed backend APIs, database models, third-party integrations
 - Produced system architecture diagrams and technical documentation
 - Collaborated directly with clients to gather requirements and deliver solutions
 - Performed testing, debugging, optimization, and deployment

- **Part-Time Game Developer**

- Artificial Network Ragnarok Online - MMORPG
- *2016 - 2019 | Remote*
 - Developed and maintained MMORPG server engines using eAthena, rAthena, and Herc
 - Built web control panels using PHP, JavaScript, HTML, CSS, integrated with MySQL
 - Implemented custom scripts, NPCs, event patchers, and auto-updaters
 - Managed Linux servers (CentOS), deployments, security, and cron jobs

- Handled database administration, optimization, backups, and performance tuning
- Maintained live operations, anti-cheat systems, and server stability for thousands of users

PERSONAL PROJECTS

● Aqora - AI-Orchestrated Real Estate Marketplace Platform

- *Solo Founder & Technical Director - AI-Directed Full-Stack Development | 2026 - Present*
 - Independently conceived, own, and technically direct Aqora - a 13-repository real estate marketplace platform (Kotlin Multiplatform / Compose Multiplatform mobile apps, Spring Boot backend microservices, Next.js web admin) - as sole product owner, using AI coding agents as the full engineering team to execute development end-to-end under my architecture, roadmap, and direction
 - Demonstrates the ability to independently design, build, and ship a production-grade, multi-platform application without a traditional engineering team, by directing AI agents the way a technical lead directs a development team: setting architecture, reviewing output, and owning every decision
 - Defined the platform's multi-repository architecture and phased MVP roadmap (Authentication through Marketplace, Rental, and beyond), sequencing delivery by user journey (guest, buyer, seller, tenant, landlord) and deliberately scoping a future transactions platform and AI-driven intelligence features into later phases
 - Directing the roadmap forward into the next MVPs - buyer and seller marketplace listings and search, tenant and landlord rental management, and the web admin console - applying the same AI-directed workflow, architecture standards, and governance model established in MVP1 (Authentication)
 - Directed backend development of Spring Boot microservices (a core backend service plus dedicated authentication, marketplace, and rental APIs) built on a contract-first REST API design
 - Directed delivery of a complete shared-code authentication flow (Splash, Sign-In, OTP Verify, Email Verify, User Info Registration) in Kotlin Multiplatform, with every screen CI-verified through automated linting (ktlint, detekt) and unit tests before release
 - Directed Figma-to-code translation of UI screens into a shared Compose Multiplatform design-system component library (design tokens, reusable components, hand-built icon set, @Preview tooling) consumed by every mobile feature module
 - Set the autonomy and governance rules AI coding agents operate under, including per-repository escalation limits, mandatory explicit go-ahead before any pull request, one-repository-per-stop scoping, and revert-to-last-known-good recovery, keeping AI-directed development safe, reviewable, and aligned to product intent
 - Diagnosed and resolved real-world release-blocking engineering issues, including a systemic GitHub Actions / release-please CI/CD publishing defect that had silently blocked package releases across two repositories, Gradle/JDK version incompatibilities, and GitHub Packages publish-credential configuration, restoring the automated build and release pipeline
 - Set up internal QA build releases through Firebase App Distribution, including fixing the app's build-versioning scheme for clear, traceable release numbering across testers
 - Authored living technical documentation (operations runbook, project manifest, MVP specifications) to keep AI-directed and human contributors aligned on architecture, status, and known constraints
- Tech Stack: Kotlin, Kotlin Multiplatform, Compose Multiplatform, Spring Boot, Next.js, Gradle, ktlint, detekt, Kover, SonarQube, GitHub Actions, GitHub Packages, Firebase App Distribution, Figma, Android Studio
- Repositories: github.com/aqora-dev (multi-repository organization)

EDUCATION

● Bachelor of Science in Information Technology

- Batangas State University - JPLPC Malvar
- 2010 - 2016
