

MARK DENVER GREGORIO

Senior Mobile Engineer / Mobile Technical Lead

(Android | Kotlin | Jetpack Compose | KMP | IoT | Cloud)

Senior Mobile Engineer with 10+ experience of combined professional and freelance experience delivering Android, cross-platform, IoT, and cloud-integrated mobile solutions. Proven expertise in Kotlin, Java, Jetpack Compose, Clean Architecture, MVVM, and KMP, with a strong background in Rest API integration, BLE, Geofencing, NFC, and real-time device communication.

Santo Tomas, Batangas, PH

CORE TECHNICAL SKILLS

• Mobile & Cross-Platform Development

- Kotlin
- Java
- Android SDK
- Jetpack Compose
- Kotlin Multiplatform (KMP)
- Compose Multiplatform
- React Native
- Swift/SwiftUI

• Architecture & Quality

- Clean Architecture
- MVVM/MVP
- Dependency Injection
- Modularization
- Unit & UI Testing
- SonarQube
- Ktlint/detekt

• IoT, Device & Location

- Bluetooth Low Energy (BLE)
- Bluetooth Mesh
- NFC
- MQTT
- Google Maps SDK
- Google APIs
- Geofencing

• Database & Storage

- PostgreSQL, MySQL, MSSQL, Oracle
- DynamoDB, MongoDB
- Firebase (Firestore, Realtime DB, DynamoDB)
- SQLite, Room, Realm

• Backend & Web

- Spring Boot
- Hibernate / JPA
- [Node.js](https://nodejs.org/)
- REST
- GraphQL
- OAuth/JWT
- React
- [Next.js](https://nextjs.org/)
- Typescript

• Cloud & DevOps

- AWS
- AWS IoT
- Firebase
- Google Cloud
- Github Actions
- Gitlab CI/CD
- Gradle

• Database

- PostgreSQL
- MySQL
- MSSQL
- Oracle
- DynamoDB
- MongoDB
- Room
- SQLite
- Realm

• AI-Assisted Engineering

- Claude Code
- AI Agent & Multi-Agent Workflows
- AI-Assisted CI/CD Debugging
- AI-Assisted Figma-to-code
- AI Workflow Orchestration
- AI-Driven Testing & Debugging

• Tools

- Android Studio
- IntelliJ IDEA
- VS Code
- Git
- Jira
- Confluence
- Postman
- Figma

Professional Experience

- **Android Developer**

- **Vendor: Encora - Makati**
- **Client: GCash Mynt**
- **March 2026 - Present**
 - Designed, developed, and maintained Android applications using Kotlin, ensuring high performance and responsiveness
 - Collaborated with cross-functional teams including product owners/managers, designers, and backend engineers to define and implement new features
 - Integrated RESTful APIs and third-party services for payments, authentication, and financial transactions.
 - Ensured application security by implementing best practices in data encryption, secure storage, and fraud prevention.
 - Optimized app performance, reducing crashes and improving load times through profiling and debugging tools
 - Conducted code reviews and maintained code quality using clean architecture principles and design patterns (MVVM/MVP)
 - Implemented unit tests and UI tests to ensure code reliability and maintainability
 - Monitored app performance and user behavior using analytic tools and crash reporting platforms.
 - Drive and contribute to android app modernization initiatives, improving legacy components, architecture, code quality, maintainability, performance, and alignment with modern Android engineering standards.
- **Key Project: GCash App**

- **Cross-Platform Mobile Developer Lead**

- **Globe Telecom - BGC, Taguig**
- **October 2025 - January 2026**
 - Develop an enterprise-scale mobile applications using Kotlin, Jetpack Compose, Kotlin Multi Platform, and React Native.
 - Design and Implement secure, high-performance mobile features including OTP authentication, push notifications, dynamic links, geolocation, and offline caching
 - Integrate mobile application with complex telco backend ecosystems (REST APIs, GraphQL, OAuth, Firebase, SMS Gateways, internal telco APIs)
 - Collaborate with backend, web, product, and design teams to define technical solution and delivery timelines.
 - Enforce architecture standards, security practices, and performance optimization
 - Participate in technical reviews, system design discussions, and continuous improvement initiatives
- **Key Project: GlobeOne App**

Professional Experience

- **Senior Software Engineer L3 / Team Lead**

- **MinebeaMitsumi Philippines, Inc.** - Sto. Tomas, Batangas (FPIP)
 - **April 2019 - October 2025**
 - Served as technical lead for multiple Android IoT applications
 - Architected mobile systems using Clean Architecture, MVVM, and Dependency Injection
 - Led development of mobile applications integrating BLE, NFC, MQTT, Geofencing, and REST APIs
 - Conducted system analysis, feasibility studies, and technical planning
 - Refactored legacy codebases to improve performance, scalability and maintainability
 - Manage GitHub repositories, performed code reviews, and handled critical production issues
 - Coordinated with Japanese engineering teams through stand-ups and technical reviews
 - Authored technical documentation, system handbooks, and user manuals
 - Participated in Agile ceremonies including sprint planning, reviews, and retrospective
-
- **Major System Delivered (Market Release)**
 - **SADIOT Mobile App (Smart Door Lock System)**
 - BLE-based secure lock/unlock, REST APIs, Wi-Fi hub integration, MQTT messaging, AWS IoT (Lambda, DynamoDB, API Gateway), Google Maps & Geofencing, Hands-free secure lock/unlock, Cognito Token
 - **SALIOT Mobile App (Smart Lighting System)**
 - Mobile lighting control (Android/iOS), BLE pairing, brightness and color temperature control, presets, automation, real-time UI feedback
 - **Bed Sensor Mobile App (Healthcare Sensor System)**
 - Bluetooth Mesh communication, medical sensor data visualization, alerts, real - time monitoring, secure device pairing
 - **Digital Car Key Mobile App (Car Key Controller System)**
 - BLE Proximity unlocking, Nearby Device APIs, NFC tap-to-unlock, geofencing triggers, secure onboarding and encryption

- **Embedded Software Engineer**

- **Kinpo Electronics Philippines, Inc.** - Lipa City, Batangas (LIMA park)
- **July 2017- July 2018**
 - Designed and developed UI and control systems for industrial SLS 3D printers
 - Integrated embedded hardware components using C#, WPF, FPGA, and microcontrollers
 - Performed debugging and troubleshooting of hardware-software integration issues
 - Collaborated with cross-functional teams to optimize system performance
 - Prepared wiring diagrams, system documentation, and user manuals
 - Supported machine testing, calibration, and quality assurance
- **Key Project:** SLSware & Buildware

○

Freelance Experience

- **Full-Stack Developer**
 - **Wrap & Carry** - Omni Channel POS system
 - **July 2025 - November 2025**
 - Designed and built a full omnichannel POS ecosystem covering mobile, web, and backend platforms
 - Developed Android mobile application using Kotlin and Jetpack Compose
 - Built backend services using Java, Spring Boot, REST APIs, and JWT authentication
 - Implemented real-time synchronization between online orders and physical store transactions
 - Integrated Xendit payment gateway for secure cashless transactions
 - Developed inventory management with automatic stock deduction, low-stock alerts, and expiration tracking
 - Implemented Google Maps-based delivery tracking
 - Built sales analytics dashboards and role-based access control (Admin, Cashier, Driver)
 - **Repositories:**
 - Mobile: github.com/MarkDenver01/carry_mobile_app
 - Backend: github.com/MarkDenver01/carrybackend
 - Web: github.com/MarkDenver01/carryfrontend
- **Developer/Programmer**
 - **Fourgrammers System Development and Services - Tanauan City, Batangas**
 - Designed and built mobile applications, web systems, and full-stack solutions from scratch
 - Create UI/UX wireframes, prototypes, and high-fidelity designs
 - Developed backend APIs, database models, third-party integrations
 - Produced system architecture diagrams and technical documentation
 - Collaborated directly with clients to gather requirements and deliver solutions
 - Performed testing, debugging, optimization, and deployment
- **Game Developer**
 - **Artificial Network Ragnarok Online - MMORPG**
 - **2019 -2016 | Remote**
 - Developed and maintained MMORPG server engines using eAthena, rAthena and Herc
 - Built web control panels using PHP, Javascript, HTML, CSS, integrated with MySQL
 - Implemented custom scripts, NPCs, events patchers, and auto-updaters
 - Managed Linux servers (CentOS), deployments, security, and cron jobs
 - Handled database administration, optimization, backups, and performance tuning
 - Maintained live operations, anti-cheat systems, and server stability for thousands of users

OJT/Personal Project

- **COMELEC (Tanauan City, Batangas)**
 - **Responsibilities**
 - Data encoding & print voter certificate
- **Aqora - Real Estate Marketplace Platform**
 - <https://github.com/aqora-dev>
 - An AI-orchestrated real estate marketplace connecting buyers, sellers, tenants, and landlords. Architected and developed the mobile platform using Kotlin Multiplatform and Compose Multiplatform, supported by Spring Boot services and a [Next.js](#) web admin platform. Designed a modular, multi-repository architecture and implemented an AI-assisted Figma-to-code workflow to streamline cross-platform feature development.

Education

- **Bachelor of Science in Information Technology**
 - Batangas State University - JPLPC Malvar
 - 2010 - 2016
